

International Macroeconomics

Overview: This is a second-year Ph.D. course on International Macroeconomics. The purpose of the course is to (a) introduce a set of models and tools used in international macro (b) present a number of active research areas in the field. The course begins with a review of canonical dynamic equilibrium models and the intertemporal approach to the current account. We will then turn to study sudden stops in capital flows, sovereign default, and financial globalization. We will focus both on positive and normative aspects. That is, we will look at questions like: What are the features of international business cycles? What distinguishes business cycles in emerging markets from developed economies? What are the causes and consequences of sudden stop in capital flows? Are capital controls desirable? What are the macroeconomic and welfare implications of financial globalization?

Requirements: The course is graded based on problem sets, and a term paper. The term paper needs be broadly related to the subjects of the course. The basic exercise involves replicating the results of a paper, which might be expanded in a new direction. One strict requirement is that the paper involves the use of numerical methods. Topics for the term paper need to be submitted for approval in a one page outline before April 30.

Lectures: Monday-Wednesday 9:30-10:45 at SOC SCI 6322

Office hours: Wednesday 1:00-2:30 pm or by appointment

Contact javierbianchi@gmail.com

Readings: The structure of the course is based on journal articles. Below is an extensive reading list where I have marked those that are required for the course. Those willing to go deeper in International Macroeconomics should go over some of the other readings as well. There are also a few textbooks that can be helpful to follow up on theoretical and empirical topics:

Obstfeld, Maurice and K. Rogoff (1996) Foundations of International Macroeconomics, MIT Press.

Reinhart, Carmen M. and Kenneth Rogoff (2009). *This Time is Different: Eight Centuries of Financial Folly*, Princeton Univ. Press.

Uribe, Martin lecture notes:

http://www.columbia.edu/~mu2166/GIM/lecture_notes.pdf

Vegh Carlos. *Open Economy Macroeconomics in Developing Countries*, MIT Press, forthcoming.

1. Real Business Cycles for Open Economies

Required Readings:

Martin Uribe lecture notes, Chapters 2-4

Aguiar Mark and Gita Gopinath (2007) “Emerging Market Business Cycles: The Cycle is the Trend,” *JPE*, 115(1).

Backus D., P. Kehoe and F. Kydland (1992) “International Real Business Cycles,” *JPE*, 100: 745-775.

Mendoza Enrique (1991) “Real Business Cycles in a Small Open Economy,” *American Economic Review*, 81(4).

Additional Readings:

Backus, D. (1993) “Interpreting Comovements in the Trade Balance and the Terms of Trade,” *Journal of International Economics*.

Backus, D. and G. Smith (1993) “Consumption and real exchange rates in dynamic economies with non-traded goods”, *Journal of International Economics* 2003

Boz, Emine, Christian Daude, and Ceyhun Bora Durdu, (2011) “Emerging Market Business Cycles Revisited: Learning about the Trend,” Forthcoming, *JME*.

Garcia Javier, Roberto Pancrazzi and Martin Uribe (2010) “Real Business Cycle in Open Economies,” *American Economic Review* December 2010.

Karabarbounis, Loukas “Labor Wedges and Open Economy Puzzles”, WP Chicago Booth, 2010

Schmitt-Grohe and M. Uribe (2003) “Closing Small Open Economy Models,” *JIE*

Obstfeld and Rogoff ”The Intertemporal Approach to the Current Account”, *Handbook of International Economics*, Gene Grossman and Ken Rogoff, eds., North Holland.
